## HOW TO CALCULATE HOW MUCH YOU NEED:

1. Figure out the square footage of the area: multiply length by the width
2. Determine the depth you want: $2^{\prime \prime}=.17 \quad 3 "=.25 \quad 4 "=.34 \quad 5 "=.42 \quad 6 "=.5$

$$
7 \text { 7"=. } 59 \quad 8 "=.67 \quad 9 "=.75 \quad 10 "=.84 \quad 11=.92 \quad 12=1
$$

3. Multiply the square footage by the inch factor in \#2 above
4. Divide that number by 27; The result is the number of cubic yards you need
